Geographic Information Systems

Dreweatt Neate and Berrys delivering Project and Property Management across the country

What can we do for you?

We feel one of the keys to successfully managing a scheme from inception to 'close out' is the effectiveness of communication at all levels. To facilitate this, we utilise up to date, digital information technology to store, collate and present information on a plan based format. The system is based on the latest OS information and compatible with CAD, Landmark and other GIS programmes.

- GIS are designed for the specific requirements of each scheme.
- Each GIS is constructed of a series of layers, which can be turned on and off to display the specific information required.
- The system is utilised to provide a 'geographic filing system'.

- Digital photographs, spreadsheets, databases, website URL's can all be linked to the GIS to give a complete history of a site.
- GPS surveyors can be used to survey features that are not shown on the Ordnance Survey maps.
- All systems based on Ordnance Survey digital maps and are compatible with GIS and CAD systems.
